I am creating an integrative music entertainment website.

The website will give viewers a way to listen to music for free with more flexibility than other websites and apps. The way it will work is that you will type in an artist and every single album they made will pop up and create a playlist for the particular artist. You will also be able to go back or repeat the track that you were listening to if you want. You will also get an unlimited amount of skips so you can listen to whatever you want.

The target audience will be anyone who listens to music on a daily basis and tech savvy.

Other projects that are similar to mine are Pandora, iheart radio, tidal, sound cloud etc. Although they are really good sites, majority of them are missing one thing which is flexibility and that is what I am trying to bring to my project.
